PALLET TRUCKPAINTED

Hydraulic hand pallet truck 2500 kg and 3000kg

Thehandpallettrucksarelightandmaneuverable; they have a small turning radius and are easy tooperate.

They are supplied with smooth-running nylon wheels or extrasilentpolyurethanewheels.

Both models have a simple and reliable hydraulic system with built-

inautomatic neutral positionvalve.

Theyhavesturdy,roundedforks.Theconstructionofthetillerarmisstrong an conical. The ergonomically correct shape of the steeringhandle makes operation easy from allangles.

The relief hand lever is integrated in the tiller arm, which also functionsasapumparm. The relief lever controls the lowering value and hence th elowering speed, which will vary proportionally with the movement of the relief lever. When the tiller arm is released it will automatically return to avertical position.

SPECIFICATIONS

HydraulicSystem

 $\label{eq:constraint} The manually operated lift pump is simple and reliable in operation. The hard$

chromed, polished pistons are resistant to rust, scratchesandstrokes. The pump is double sealed which secures efficientlyagainstleakages and life seals. The prolongs the of the lift cylinder isweldeddirectlyontothepump, and the oil reservoir is welded around the lift cyl inder. This means efficient tightness and eliminates tube andhoseconnections.

The hand pallet truck is equipped with a neutral position valveasstandard. When the tiller arm is moved slowly, the neutralpositionensures that the load is not lifted (driving position). When the tiller armismoved a little faster, the load is lifted the usual way (lifting function). Thesystem is simple, adjustable and reliable inoperation.

Wheels

The steering wheels of all models can turn 110° to eitherside.

They are suspended in an articulating shaft, which ensures that all 3wheelsets have full road contact. The entry wheels are facilitating crossentering pallets with bottomboards.

Options

The hand pallet trucks can be supplied with parking brake and skidframe for pallets with extra great height above thefloor.

SpecialVersions

The hand pallets truck can be tailored with the followingpossibilities:

- Minimum fork length: 400mm
- Maximum fork length: 3000mm
- Minimum outside fork spread: 320mm
- Maximum outside fork spread: 1500mm
- Sloping forks for handling of paperrolls
