SOLO

**ONE FOR ALL:
BACKACTIVE SITTING, STANDING, AND MOVING.**

**For More Dynamic Movement
at the Workplace:**

Pull up a chair just for a second.
Hold a quick meeting while standing.
With ROVO SOLO, the new standing
stool, you get more motion at the work-
place. That's because ROVO SOLO is
always there – at short meetings,
creating team sessions, or for a quick
chat among colleagues.

At the desk, in the lab, in doctors'
offices, in industry, or in reception
areas – or when you want to convert
standing workplaces into sitting and
standing workplaces – the range of
possibilities offered by ROVO SOLO is
as extensive as your imagination.

**MODEL 3800
WITH RING**

THE MONOPAD MULTIFUNCTIONAL AND BRILLIANTLY SIMPLE

MODEL 3810
WITH MONOPAD

① **Stable Foot**

For an extended action radius with a secure sense of sitting. The foot with integrated ERGO BALANCE movement joint offers high stability and resistance to tipping on any flooring and any surface.

② **Comfortable Seat Upholstery**

Rounded upholstery without a shaped sitting direction allows you to use this seat from all sides.

③ **ERGO BALANCE Technology**

The ERGO BALANCE movement joint is directly integrated into the seat near your body and affords 360° of motion. The seat can thus react to even slight pelvic movements. This form of mobile sitting activates your back muscles and improves the circulation of fluid to the intervertebral discs (Version EB S2).

④ **Gas Spring for Height Adjustment**

Infinitely adjustable, with one version for adjustment from 54 to 69 cm and another version for 63 to 86 cm.

⑤ **Practical Handle for Carrying**

It can be grasped and taken anywhere. ROVO SOLO is easy to carry and shift in place.

⑥ **Monopad**

Multifunctional and compact – the Monopad serves as an arm rest, as a support for tablets, to sit up, and to limit the back. Encourages a shift in position.

BACK TO **NATURAL** FREEDOM OF MOTION.

ROVO SOLO Encourages a Change in Posture:

Standing for longer periods of time costs energy and is fatiguing. After just a short time, one's legs and back start to ache. People who work while standing know all about that. Static sitting is just as stressful. That's because people need natural movement to maintain physical health. This standing seat supports you when standing and offers a shift in posture when sitting. It's also the ideal supplement at height-adjustable desks.

The infinitely adjustable gas spring height-adjustment makes it possible for ROVO SOLO to accommodate all body sizes almost perfectly. The soft spring deflection combined with the ERGO BALANCE technology encourages you to move, is fun, and helps maintain fitness.

Design: Henner Jahns

SOLO is a trailblazing innovation which ROVO has developed together with the designer Henner Jahns. He is the CEO of the Gecco Vision design office in Los Angeles.

The design of ROVO SOLO clearly communicates the function of this sitting furniture. In the standard model, the seat upholstery is encircled by a ring enabling you to easily carry, slide, or reposition the stool. ROVO SOLO is fun to use and livens things up in offices and at the workplace.

⑥

VISION
GECCO

ERGO BALANCE: FOR SITTING IN MOTION

- Encourages occasionally shifting one's sitting position
- Activates your back muscles
- Relieves strain on spinal column and intervertebral discs
- Promotes the elasticity of the intervertebral discs
- Stimulates your circulation and metabolism
- The guided dynamic sitting system provides optimal support on all sides

The Ergo Balance Principle: More Freedom of Motion for a Greater Action Radius:

With ROVO SOLO, sitting, standing, and moving alternate almost automatically. When you stand, your sitting apparatus is relieved of stress. When you sit, ROVO SOLO encourages you to keep in motion. That's not only fun – it's also the only effective means of maintaining a healthy back and overall good health.

How It Works:

This innovative sitting concept is based upon ERGO BALANCE technology, which is integrated in both the foot and under the seat (Version EB S2). The center column can be inclined, thus widening your action radius. The movable seat activates you; like when sitting on a ball, your pelvis can be kept in motion. This strengthens your back muscles, reduces the stress on your intervertebral discs, and promotes circulation. With this principle, ROVO SOLO represents a unique solution among standing aids.

Firm Support in Every Position:

The technology in the chair's joints provides firm support and a pleasant sitting experience in every sitting position. That's because the farther you shift in any direction, the more ROVO SOLO acts to counter that movement in the opposite direction.

PRODUCT FEATURES (ALL VERSIONS)

STOOL:

- Sitting stool with seat upholstery and ring.
Model 3800 with a height adjustment range of 54-69 cm
- Standing stool with seat upholstery and ring.
Model 3810 with a height adjustment range of 63-86 cm
- Movement module in the foot (EB S1) or in the foot and under the seat (EB S2)
- Upholstery with 3D woven fabric:
In black, kiwi, blue, red, gray, and anthracite
- Metal parts: Seat support, ring, Monopad retainer, cone retainer at the foot, in black or white powder.
Foot made of black plastic.
